

2023 New Holland C332 Price in Kaliningrad is 5380000P

- Condition New
- Serial Number C332STDFLOWEHROPS
- Year 2023
- Make New Holland Construction
- Model Compact Track Loaders C332
- Horsepower 74
- Fuel Type Diesel

CONTINUOUS IMPROVEMENT, UNCOMPROMISING PERFORMANCE

300 Series compact track loaders are reliable workhorses that deliver high performance in all conditions. These models build on the strength, visibility, power and smooth ride you've come to expect from New Holland compact track loaders with the addition of key enhancements that improve durability, operating ease and overall productivity.

New creep mode

- For even more productivity, available creep mode (EH models only) lets you trench, cold-plane or cut brush with greater precision at slower speeds.

8" LCD Multifunction Display makes operation easier

- The new, customizable 8" LCD Multifunction Display with an integrated back-up camera gives you a quick, convenient look at engine settings and performance information, all while providing even greater visibility to the rear of the loader for better operating efficiency and safety.

Wide, comfortable cab with superior visibility

- The 300 Series cab is one of the widest in the industry. It's quiet, easy to enter and exit, and provides a clear view in all directions, even to the raised bucket or attachments. You get an unprecedented view out the back thanks to the 8" LCD Multifunction Display, the large rear window, low engine hood and no rear frame towers. The fully sealed and pressurized cab minimizes dust and exhaust infiltration.

Finish jobs faster with Super Boom®

- The Super Boom® vertical lift linkage provides more dump height and reach, so you can load material into the center of high-sided truck boxes or hoppers. But, it also maximizes visibility, providing a clear view to the cutting edge, to the bucket at full height, and to the sides and rear.

Power through tough jobs

- The reliable hydraulic system delivers fast cycle times. In-line hydraulic pumps produce less noise and provide extra-smooth operation.

Smooth ride, longer life

- The low-profile track undercarriage makes cleanout easier, reduces noise and increases durability. It also provides a smoother ride, thanks to steel-embedded tracks rolling on the rubber instead of steel. Fewer moving parts than competitive designs mean less complexity—and complications—which adds up to longer track life.
