BRAND ADVANTAGE.

JUSTLIN has always adhered to technological innovation and mobile intelligence device efficiency and industry leadership Strive to create more value for customers To take more social responsibility for environmental protection Keep pace with The Times, the pursuit of excellence, is committed to become a global mobile crushing screening leading brand For construction waste and mine tailing to realize the resource and value of the contribution.

< Excellent design and development

To standard first-line imported brands, combined with the domestic industry application characteristics, keep the model innovation always leading, the function and configuration localization, customization, close to customer needs as the design standard.

< Intelligent optimized production

Showroom full display assembly, create dust-free workshop, use assembly design, zoning manufacturing, power modular upgrade optimization, so that customers can apply to the latest update at any time, avoid using business to digest old technology, old inventory.

< Ultra high equipment configuration

To realize the modular selection function, a variety of models, full power solution module, independent pre-screening module, ultrasonic material level sensing module, dust and noise reduction accessories and other high configuration selection, purchased parts are directly purchased from domestic and overseas first-line quality factories, enrich customer choice.

CHOOSE JUSTLIN

- Always adhere to scientific and technological innovation, intelligent control, efficient operation, industry leading
- **Strive to create production competitiveness for customers, take more responsibility for green environmental protection**
- **The pursuit of excellence, committed to become the world's leading brand of material processing equipment**
- **To realize the energy saving value of double recycling of solid waste resources and production equipment**

< Diffrentiation And Service

Research and development innovation, model differences, the first research and development of crawler mobile sand making station, sand washing station, four-layer screen, double screen, all kinds of oil-electric hybrid crushing and screening integrated machine, to provide customers with agent operation, agent processing and leasing services, to meet the needs of different customers in different development stages of the industry.

< Professional customization

Drive solutions according to the working condition of optional, grid solutions, gas-electric hybrid and hydraulic full power solutions, such as research and development of advanced technology solutions accumulation, based on solid waste treatment building and mining applications free choice of different condition of machine configuration and the omni-directional to collect customer feedback, has the rich are different from competing goods of the configuration options to solve the problem.

< Strong cost performance ratio

Pursuing PRatt & Whitney is to optimize design, increase scale and reduce cost, so that customers can purchase with low investment to high configuration, and provide the updated distribution to customers for free experience, so as to share progress.

INNOVATION

JUSTLIN subsoil mobile and integrated crushing screening equipment market, consistently adhere to the "sustainable innovation rich customer experience", all sorts of online model achieved the level of market leading put into use, JUSTLIN is always at the forefront in meeting the customized needs of customers. Prepared to increase customer revenue with expertise and innovation

As always Meeting
the customized needs of customers

Integrating specialty and innovation into the products and services provided
reducing customer investment improving customer returns

MJ SERIES TRACKED MOBILE JAW CRUSHING STATION

JAW CRUSHING

Equipped with European C series crushing machine, large folding bin, equipped with independent pre-screening system, in addition to the iron spray device, mainly do the primary crushing of materials, feed particle size, wide discharging range, suitable for all kinds of rocks. Convenient transfer, high crushing efficiency.

APPLICABLE FIELDS

Medium and high hardness material of the first crushing or primary crushing

- Crushing of mine ore
- Construction waste recycling
- Construction aggregate production
- Highways/railways
- Road and bridge construction

- ✓ Separate pre-sieving
- ✓ Intelligent feeding system
- ✓ Large range of discharge

MI SERIES TRACKED MOBILE IMPACT CRUSHING STATION

IMPACT CRUSHING

Each module is compact and efficient, with hydraulic assistance in many places, and equipped with a return material screening system. In addition, there is an iron removal air separation spray device, which can be used for primary and secondary crushing, suitable for medium soft rock and construction

CHARACTERISTICS EQUIPMENT

Integrating specialty and innovation into the products and services provided reducing customer investment and improving customer returns

- ✓ Powerful
- ✓ The product has good grain shape
- ✓ Can effect comparing high

APPLICABLE FIELDS

Primary and secondary crushing stages of medium and soft hardness materials

- Crushing of mine ore
- Construction waste recycling
- Construction aggregate production
- Highways/railways
- Road and bridge construction

JUSTLIN + PRODUCT

MI-RTE SERIES TRACKED MOBILE IMPACT CRUSHING AND SCREENING STATION

CRUSHING AND SCREENING

At the same time, it can realize crushing and screening on a tracked vehicle. At the same time, it is upgraded to a oil-electric hybrid power, equipped with PLC one-key intelligent start, which can do the first and second stage crushing, suitable for medium soft rock and construction waste. The machine has wide application, high intelligence and simple operation.

CHARACTERISTICS EQUIPMENT

Integrating specialty and innovation into the products and services provided reducing customer investment and improving customer returns

- ✓ Broken screen one
- ✓ Oil electric amphibious
- ✓ The PLC starts with one click

APPLICABLE FIELDS

Primary and secondary crushing stages of medium and soft hardness materials

- Mine/ore/coal mining
- Concrete mixing plant
- Dry mortar/power plant desulfurization
- Quartz sand
- Reuse of construction waste
- Road and bridge construction

CRUSHING AND SCREENING

At the same time, it can realize crushing and screening on a tracked vehicle. At the same time, it is upgraded to a oil-electric hybrid power, equipped with PLC one-key intelligent start, which can do the first and second stage crushing, suitable for medium soft rock and construction waste. TX SERIES TRACKED MOBILE CRUSHING AND SCREENING FOUR IN ONE STATION

FOUR IN ONE STATION

TX4 is a master in the field of crawler mobile hard rock crushing and screening. It creatively integrates four units: vibrating feeder, jaw crusher, multi cylinder hydraulic cone crusher and three-layer two-stage screen. Through exquisite structural design, TX4 achieves the screening effect of split hard rock production line, opens a new journey of mobile hard rock crushing, and is JUSTLIN's breakthrough contribution to the industry.

- ✔ Hard rock bane
- ✔ A creative breakthrough
- ✔ Ultra-high energy efficiency

APPLICABLE FIELDS

- Secondary and tertiary crushing and screening of medium and high hardness materials
- The site is tight for hard rock line production
 - Gravel, granite, diabase and other high wear resistant stone (SiO₂ content higher than 75%) crushing sand production
 - Pre-milling crushing of iron ore in large concentrators

JUSTLIN + PRODUCT

TX SERIES TRACKED MOBILE IMPACT CRUSHING AND SCREENING STATION

IMPACT CRUSHING AND SCREENING

TX3IE is the king of high efficiency in the field of soft rock crushing and screening in crawler movement. It not only integrates three core units of vibration feeder, counterattack breaking and three-layer double-stage screening to achieve the screening effect of split production line, but also equipped with independent pre-screening device to further improve the crushing efficiency; It has also been upgraded to petrol-electric hybrid power, which can be started with one button on the scene. It can be widely used in soft rock crushing and screening, construction waste recycling and utilization and other fields, which is a key step in the efficient integration of JUSTLIN all-in-one machine.

CHARACTERISTICS EQUIPMENT

Integrating specialty and innovation into the products and services provided reducing customer investment and improving customer returns

- ✓ Broken screen one
- ✓ Oil electric amphibiousThe
- ✓ PLC starts with one click

APPLICABLE FIELDS 适用领域

Secondary and tertiary crushing stages of medium and soft hardness materials

- Crushing of mine ore
- Construction waste recycling
- Construction aggregate production
- Highways/railways

TX SERIES TRACKED MOBILE CONE CRUSHING AND SCREENING STATION

CONE CRUSHING AND SCREENING

TX3CE is the highly efficient king in the field of hard rock crushing and screening in crawler movement. It not only integrates the three core units of vibration feeder, cone breaking and three-layer double screen to achieve the screening effect of split production line, but also equipped with independent pre-screening device to further improve the crushing efficiency; It has also been upgraded to petrol-electric hybrid power, which can be started with one button on the scene. It can be widely used in the crushing and screening of medium and high hardness rock, which is a key step of JUSTLINin the efficient integration of the all-in-one machine.

- ✔ Hard rock bane
- ✔ Broken screen one
- ✔ Oil electric amphibious

APPLICABLE FIELDS

Secondary and tertiary crushing and screening of medium and high hardness materials

- Hard rock (granite/basalt/cobblestone/diabase, etc.)
- Secondary crushing and screening

JUSTLIN + PRODUCT

MDS SERIES TRACKED MOBILE SCREENING STATION

SCREENING

JUSTLIN MDS series crawler mobile screen station, equipped with car automatic folding belt machine, large processing capacity, can be used for fine screening of materials, suitable for all kinds of sand and construction waste after the crushing of finished material screening, flexible overall transfer, durable, high reliability.

CHARACTERISTICS EQUIPMENT

Integrating specialty and innovation into the products and services provided reducing customer investment and improving customer returns

- ✔ Double section of the screen body
- ✔ Accurate screening
- ✔ Hydraulic auxiliary

APPLICABLE FIELDS 适用领域

Material or coarse material used for screening processing

- Sand/pebble material classification
- Construction waste material classification
- Metallurgical/coal material classification
- Classification of building materials

SCREENING

JUSTLIN MDS series crawler mobile screen station, equipped with car automatic folding belt machine, large processing capacity, can be used for fine screening of materials, suitable for all kinds of sand and construction waste after the crushing of finished material screening, flexible overall transfer, durable, high reliability.

MSH SERIES TRACKED MOBILE HORIZONTAL SCREENING STATION

HORIZONTAL SCREENING

The three-axis drive elliptical vibration track has the advantages of both circular vibrating screen and linear vibrating screen; With adjustable amplitude, synchronous excitation, and equipped with large torque slow speed feeder to ensure uniform feeding, it has better effect on screening materials with high viscosity and difficulty. It is widely used in fields with high requirements for screening efficiency and accuracy. The whole machine has large processing capacity, strong stability, many screening types and high grading accuracy.

- ✔ Huge handling capacity
- ✔ Advanced mixing and screening
- ✔ Screening of viscous materials

APPLICABLE FIELDS

Used for preliminary screening of soil and rock separation

- Highway, railway, bridge and other high - standard engineering grade ingredients screening
- Gobi wind fossil finished materials (with a certain viscosity) large capacity screening

MSZ SERIES TRACKED MOBILE HEAVY-SCREENING STATION

HEAVY-SCREENING

It is equipped with plate type high-torque feeder, first-layer heavy-duty grate screen and 1.2m ultra-wide pattern belt machine, which can effectively carry the screen flow and turn of super large materials. It belongs to primary screening, and is suitable for special scenes such as earth and stone separation, preliminary screening of construction waste and so on. The effect is particularly good.

- ✔ Earth-rock separation
- ✔ Heavy framework
- ✔ Stable and durable

APPLICABLE FIELDS

Used for preliminary screening of soil and rock separation

- mining
- Construction waste screening
- Coal gangue screening
- Sand and stone aggregate screening

TECHNOLOGICAL PROCESS

● – Hard rock crushing production line

APPLICABLE FIELDS

Widely used in all kinds of mining rock, asphalt, high standard concrete, cobblestone, granite and other hard materials crushing screening

● – Construction waste production line

TRACKED MOBILE IMPACT CRUSHING AND SCREENING STATION

APPLICABLE FIELDS

It is widely used in the crushing and screening of bluestone, limestone, soft rock and recycled aggregate of construction waste and other materials. It is generally used in the scene of screening out two finished materials

● – Sand production line

APPLICABLE FIELDS

Widely used in all kinds of mining rock, asphalt, high standard concrete, cobblestone, granite and other hard materials crushing screening

● – Soft rock crushing production line

TRACKED MOBILE SCREENING STATION

TRACKED MOBILE IMPACT CRUSHING STATION

APPLICABLE FIELDS

It is widely used in crushing and screening of bluestone, limestone, soft rock and recycled aggregate of construction waste, etc. It can screen out up to four finished materials

TECHNOLOGICAL PROCESS

- — **Hard rock crushing production line**
(dual-use version of oil and electricity)

APPLICABLE FIELDS

Widely used in all kinds of mining rock, asphalt, high standard concrete, cobblestone, granite and other hard materials crushing screening, can produce three finished materials

- — **Hard rock crushing production line**

TRACKED MOBILE CRUSHING AND SCREENING FOUR IN ONE STATION

APPLICABLE FIELDS

Widely used in all kinds of mining rock, asphalt, high standard concrete, cobblestone, granite and other hard materials crushing screening, can produce three finished materials

- — **300-400T**
Earth-rock separation crushing production line
(dual-use version of oil and electricity)

APPLICABLE FIELDS

It is used for crushing and screening again after initial screening of soil and stone

- — **300-400T**
Hard rock crushing production line

TRACKED MOBILE HORIZONTAL SCREENING STATION MSH3619

TRACKED MOBILE CONE CRUSHING STATION MC400HR

TRACKED MOBILE JAW CRUSHING STATION MJ550

APPLICABLE FIELDS

Widely used in all kinds of mining rock, asphalt, high standard concrete, cobblestone, granite and other hard materials crushing screening

JUSTLIN

Recycling solid waste Innovative applications

Recycling solid waste
Innovative applications **01**

Sand and stone aggregate application

4 finished aggregates

13stone

12stone

51stone

05Stone powder

Common uses of recycled aggregate

simplest and most common use

After crushing as building foundation
cushion or road base

High value added use

After crushing, the production of concrete
block bricks, paving bricks, Recycled permeable
brick and other brick products

Common uses of waste concrete

To make recycled aggregate concrete instead
of part of natural sand and stone aggregate

Recycling solid waste
Innovative applications **02**

Construction waste recycling

Turn waste into treasure
'two-way benefits

In addition to iron
Sales increase revenue

Plastic sheeting debris
Centralized garbage
delivery station

Red brick particles
recycling

Fine sediment
Meet the requirements of
landfill treatment

Make eco permeable bricks

JUSTLIN | SUPPLY CHAIN BRAND SYSTEM

 Caterpillar chassis —Britain Strickland Strickland track chassis is heavy bearing, good wear resistance, easy maintenance, strong and durable	 Engine —Dongfeng Cummins Leading global power solutions provider	 Hydraulic pump —Sault Danvers, Denmark World class hydraulic components supplier
 Vibration motor —Oli - Wolong China-italy joint venture brandVibration motor sales world No.1 / lifetime maintenance free	 Travelling reduction gear —Bonfiglioli Through high quality products and a variety of advanced technology carefullyIntegration, to provide customers with customized solutions	 Damping spring —Rhoda, Switzerland, More than 70 years of history in the field of machinery and automationA leading company in innovative elastic module technology manufacturers
 Hydraulic solenoid valve set —United States Eaton A leading global manufacturer of diversified industrial productsElectrical control/power distribution/uninterruptible power supply, etcProducts enjoy a worldwide reputation	 Manual control valve —Strong field hydraulic Hydraulic control industry benchmark, excellent quality	 Generator Stamford, England Global famous brand, with excellent quality, good technical support ability and after-sales service
 Electrical control —Schneider, France France's global electrical companyGlobal expert in energy efficiency management and automation	 Battery —Varta, Germany A world-renowned automobile battery brand	 Power control system —deep sea world's leading generator set controller manufacturer, has a strong R & D design and manufacturing strength

SERVICE

Full service chain

24 hour service

10 minute quick
response to customer
request

24 hours to the
customer site
in the province

48 hours to reach the
customer site outside
the province

24 HOURS WORRY-FREE SERVICE

Pre-sale service

1. Understand customer requirements in detail and provide product configuration schemes for customer screening
2. Invite customers to visit the production site or factory, and explain the whole process
3. Introduce necessary supporting schemes or financing schemes according to customers' needs

Sale service

1. Timely provide customers with the production progress of products in the workshop
2. Invite customers to the factory for inspection and delivery before delivery according to requirements
3. Monitor transportation links throughout the whole process to ensure safety and timeliness
4. Contact the customer in advance to prepare the auxiliary items needed on site, so as to ensure the production in a shorter time
5. On-site commissioning and production, engineers escort the whole process
6. Provide professional training and help customers cultivate professional production and operation teams on site

After-sales service

1. Equipped with exclusive after-sales service engineers to maintain efficient communication
2. Continuously provide professional training for customers and cultivate subsequent professional talents
3. Regularly visited customers for on-site inspection to understand equipment conditions and solve problems
4. Establish customer product usage files and update them regularly
5. Lifelong supply of spare parts for customers

Service mechanism

1. one-day response system: troubleshooting control is completed within 24 hours.
2. Double supervision system: general manager and marketing manager double supervision, to provide human resources, material resources, Financial, technical guidance accessories supply and other green channels.
3. Three-minute response system: the service personnel are required to contact the customer within 3 minutes after receiving the delivery order instruction.
4. Parts supply guarantee system: with a faster, more effective way in the shortest time delivery.

Value-added services

1. Annual rolling field personnel training
2. Regular on-site inspection
3. Technical upgrade guidance
4. Invited to the new product launch conference

Service Management Mode

Focus on the customer

- In advance to prevent
- Efficient communication
- Rapid maintenance
- Accurate archive
- Storage of accessories and wearing parts

Communication information tracking
