About Vitro S.A

We are a Spanish corporate group specialized in the development, manufacture and distribution of equipment, software and reagents for in-vitro diagnosis (IVD) through the application of techniques based on non-invasive tests, such as immunohistochemistry and molecular biology techniques. We commercialize a broad portfolio of primary antibodies and universal detection systems for Immunohistochemistry, and in the field of molecular diagnostic, the Company offers a panel of multiplex PCR kits (CE-IVD) based on proprietary DNA-FLOW Technology, for HPV genotyping and for the identification of both pathogens and antibiotic resistance markers responsible of different infectious diseases: bloodstream infections, STD, Respiratory Viruses and Tick-Borne bacteria.

We are committed to technological innovation and personalized treatment, offering the best IVD diagnosis solutions in different areas. Our goal is to improve the health of each patient, and to achieve it we work under high quality standards, seeking the excellence of our products and services. We have a highly committed and qualified human team to offer the best service and most efficient and accurate diagnostic solutions, adapted to each client.

Vitro, S.A. declares, under its sole responsibility that the products to which this Declaration relates in each case and according to applicability with the directives complies with the Standards or Normative Documents detailed below.

Directive 98/79/EC of the European Parliament and of the Council of 27 October 1998 on in vitro diagnostic medical devices. Vitro ensures and declares that all the manufactured CE marked products comply with the essential requirements of the EC-Directive which apply to them. All the products are classified in accordance with Annex III. This catalog is based on the implementation of the Quality System approved for the design, manufacture and final inspection of the products concerned, in accordance with the EC-Directive.

About our Immunohistochemistry

Vitro (Master Diagnóstica™) produces and sells a complete portfolio of immunohistochemically diagnostic products including primary antibodies, ultra-sensitive micro polymer-based universal detection systems and auxiliary reagents. We also offer the possibility of complete automation of the entire immunostaining process (MD-Stainer equipment).

Our catalog has a wide range of top quality primary antibodies optimized for pathological diagnosis on tissue sections fixed in buffered formalin and paraffin embedded. We supply our products to Pathology Laboratories, both public and private, as well as to Research Centers.

The catalog consists in about 350 antibodies to cover the vast majority of antigenic markers of diagnostic and prognostic relevance. They are presented grouped by panels for different pathologies by organs or systems.

We have a team of pathologists and experts who work daily to be at the forefront of our client's challenges and needs.

Take Note:

We have several presentations for the antibodies (prediluted RTU and concentrated) that suit the needs of each client. For more information do not hesitate to contact us.

In the content of antibodies, the staining patterns are as follows:

STAINING PATTERN: N – Nuclear; C – Cytoplasmic; M - Membrane; I - Interstitial

In the content of antibodies, the status can be:

- “RUO” - Means “Research use Only”: Not intended for diagnostic use.
- “IVD” - Means “CE-IVD”: Products intended for in vitro diagnostic use and conforming European Directive (98/79/EC).

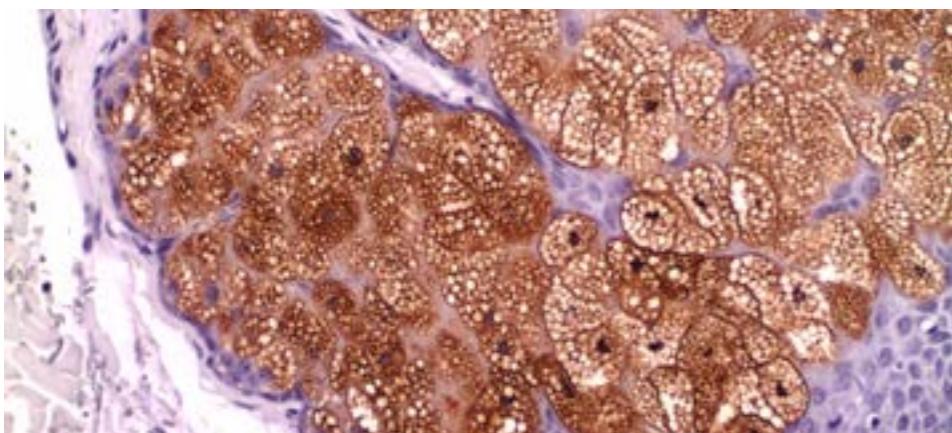

Recommended positive controls for each marker are indicated and recommended according to our validation and following the available bibliography. Each laboratory is free to choose the controls it considers for its validations.
